

**Earth, Moon, and Sun** ▪ *Connecting Concepts*

# Connecting Concepts

Develop a concept map that uses the key concepts and key terms from this chapter. Keep in mind the big idea of this chapter: The movements and relative positions of Earth, the moon, and the sun cause Earth to experience day and night, years, seasons, moon phases, eclipses, and tides. The concept map shown is one way to organize how the information in this chapter is related. You may use an extra sheet of paper.
